NewTek Connect Spark Battery Connector Safe Tap (D-Tap)

To showcase the overwhelming benefits of our new SafeTap connector, we are introducing our line of premium hook-up cables to the various commonly used accessories in our industry. Since many pieces of equipment suffer catastrophic failure when plugged in backwards (as is very easily possible with the commonly used PowerTap and similar D-Tap style connectors) we will first start to offer those that benefit most from the SafeTap's many features. Our cables may cost a little more than others on the internet but the benefits of the SafeTap can mean the difference of your production going down or not.

All cables unless otherwise noted are 12" long.
Custom length available upon request.
